COMPANY

A XRW é uma jovem empresa que nasceu em Outubro de 2005 na zona industrial de Vila Verde, pertence ao concelho de Oliveira do Bairro e ao distrito de Aveiro. Com o objectivo de garantir qualidade, aliada ao excelente design e inovação a XRW dedica-se principalmente ao fabrico de proteções em duro alumínio para moto4, ATV's e UTV's, bem como, a uma vasta gama de outros artigos.

Esta empresa tem como fundamento principal o mercado nacional e internacional onde procura inovar e otimizar sem colocar em causa a qualidade do produto final.

A XRW controla todo o processo de concepção e construção do seu equipamento. A adaptação a cada modelo é minuciosamente estudada sem margem para erro.

Durante o processo de fabrico o alumínio sofre vários tipos de tensões, especialmente nas zonas de dobragem e de soldadura, que enfraquecem a resistência mecânica das peças.

Por este motivo, no final do processo produtivo, **TODAS** as peças XRW, são submetidas a Tratamento Térmico, normalmente designado por Têmpera. (trata-se de um tratamento de alta temperatura, que devolve todas as propriedades mecânicas à liga metálica, quebrando tensões, aumentando a resistência, durabilidade e elasticidade das peças).

Este processo térmico de estabilização e aumento de resistência do alumínio, é exactamente o mesmo que é utilizado nas Industrias Automóvel e Aeronáutica.

A XRW orgulha-se de ser a única empresa Europeia a utilizar este processo no fabrico de peças metálicas para acessórios de ATV/Quad e OFF Road. Conhecida como a Marca dos Campeões, a XRW é a escolha da grande maioria de pilotos de TOPO a nível Europeu.

The XRW is a young company that was born in October 2005 in the industrial zone of Vila Verde, belongs to the municipality of Oliveira do Bairro and the district of Aveiro. In order to ensure quality, coupled with excellent design and innovation XRW is principally engaged in the manufacture of aluminum for protection in hard aluminum for Quad's, ATV's and UTV's, as well as a wide range of other items.

The XRW controls the entire process of design and construction of your equipment. Adapting to each model is thoroughly studied with no margin for error.

During the process of manufacturing aluminum undergoes various kinds of stress, especially in areas of bending and welding, which weakens the mechanical strength of the parts.

For this reason, at the end of the production process, **ALL** XRW parts are subjected to heat treatment, commonly called hardening. (this is a high temperature treatment, which returns all the mechanical properties of the alloy, breaking stress, increasing the strength, durability and elasticity of the pieces).

This thermal stabilization and increased resistance of aluminum, is exactly the same as is used in the automotive and aeronautics.

The XRW proud to be the only European company to use this process to manufacture metal parts accessories for ATV / Quad and Off Road. Known as the Brand Champions, the XRW is the choice of most of the top riders at the European level.

XRW Racing Parts!

ACABAMENTOS FINISHING

PR
Preto liso mate para exterior
Matte black finish for exterior

PO
Polido (brilhante).
Polishing finishing (shining).
